

IMAGES

<code>docker pull IMAGE</code>	Download an image from a registry
<code>docker build -t NAME .</code>	Build an image from a Dockerfile in current dir
<code>docker images</code>	List local images
<code>docker rmi IMAGE</code>	Remove an image
<code>docker tag SRC TARGET</code>	Tag an image
<code>docker push IMAGE</code>	Push image to a registry
<code>docker history IMAGE</code>	Show image layer history
<code>docker save -o FILE IMAGE</code>	Export image to a tar file
<code>docker load -i FILE</code>	Import image from a tar file

CONTAINERS: LIFECYCLE

<code>docker run IMAGE</code>	Create and start a container
<code>docker run -d IMAGE</code>	Run detached (background)
<code>docker run -it IMAGE sh</code>	Run interactively with a shell
<code>docker run -p 8080:80 IMAGE</code>	Map host:container port
<code>docker run --name N IMAGE</code>	Assign a container name
<code>docker run --rm IMAGE</code>	Remove container when it exits
<code>docker start CONTAINER</code>	Start a stopped container
<code>docker stop CONTAINER</code>	Gracefully stop a container
<code>docker restart CONTAINER</code>	Restart a container
<code>docker pause CONTAINER</code>	Pause processes in a container
<code>docker unpause CONTAINER</code>	Unpause a container
<code>docker kill CONTAINER</code>	Force-stop a container
<code>docker rm CONTAINER</code>	Remove a stopped container
<code>docker rm -f CONTAINER</code>	Force remove a running container

CONTAINERS: INSPECTING

<code>docker ps</code>	List running containers
<code>docker ps -a</code>	List all containers (incl. stopped)
<code>docker logs CONTAINER</code>	View container logs
<code>docker logs -f CONTAINER</code>	Follow (stream) logs live
<code>docker inspect CONTAINER</code>	Show detailed JSON metadata
<code>docker top CONTAINER</code>	Show running processes in container
<code>docker stats</code>	Live resource usage stream
<code>docker diff CONTAINER</code>	Show filesystem changes
<code>docker port CONTAINER</code>	Show port mappings

EXEC & COPY

<code>docker exec -it C sh</code>	Open shell in running container
<code>docker exec C CMD</code>	Run a command in running container
<code>docker attach CONTAINER</code>	Attach to container's main process
<code>docker cp C:SRC DEST</code>	Copy file from container to host
<code>docker cp SRC C:DEST</code>	Copy file from host to container

VOLUMES

<code>docker volume create NAME</code>	Create a named volume
<code>docker volume ls</code>	List volumes
<code>docker volume inspect NAME</code>	Show volume details
<code>docker volume rm NAME</code>	Remove a volume
<code>docker volume prune</code>	Remove unused volumes
<code>-v NAME:/path</code>	Mount volume into container (with run)
<code>-v \$(pwd) :/path</code>	Bind-mount host directory

Networks		
<code>docker network ls</code>		List networks
<code>docker network create N</code>		Create a network
<code>docker network inspect N</code>		Show network details
<code>docker network connect N C</code>		Connect container to network
<code>docker network disconnect N C</code>		Disconnect container from network
<code>docker network rm N</code>		Remove a network

Docker Compose		
<code>docker compose up</code>		Create and start all services
<code>docker compose up -d</code>		Start services in background
<code>docker compose down</code>		Stop and remove services
<code>docker compose build</code>		Build/rebuild services
<code>docker compose ps</code>		List compose containers
<code>docker compose logs -f</code>		Follow logs for all services
<code>docker compose restart</code>		Restart services
<code>docker compose exec S sh</code>		Shell into a service container

System & Cleanup		
<code>docker system df</code>		Show disk usage
<code>docker system prune</code>		Remove unused data (stopped containers, dangling images, networks)
<code>docker system prune -a</code>		Also remove unused images
<code>docker container prune</code>		Remove all stopped containers
<code>docker image prune</code>		Remove dangling images
<code>docker info</code>		Show system-wide Docker info
<code>docker version</code>		Show Docker version details
<code>docker login</code>		Log in to Docker Hub / registry
<code>docker logout</code>		Log out of registry
<code>docker search TERM</code>		Search Docker Hub

Dockerfile Basics		
<code>FROM image</code>		Base image
<code>WORKDIR /path</code>		Set working directory
<code>COPY src dest</code>		Copy files into image
<code>RUN cmd</code>		Execute command during build
<code>ENV KEY=val</code>		Set environment variable
<code>EXPOSE port</code>		Document container port
<code>CMD ["cmd"]</code>		Default runtime command
<code>ENTRYPOINT ["cmd"]</code>		Fixed executable entry point
